

SQL Sentry Event Manager Fortune 500 Energy Services Company

A Fortune 500 energy services company needed a centralized job management tool for their rapidly growing SQL Server enterprise and selected SQL Sentry Event Manager to fulfill their requirements. The DBA team was tasked with managing over 1600 jobs across 100+ SQL Servers and it had become apparent that they needed a reliable alerting mechanism and a centralized system. Time was being wasted weekly reviewing and reprocessing critical jobs that failed to run during their allotted time, and the DBA team also experienced several key job failures on production servers with no notification.

Why SQL Sentry Event Manager?

The DBA team chose SQL Sentry Event Manager for the following primary reasons:

- All SQL jobs could be managed from a centralized calendar,
- The agent-less architecture eliminated the need to configure alerting on each SQL Server, and
- The SMTP mail client provided a reliable notification system.

Benefits of SQL Sentry Event Manager

SQL Sentry Event Manager enabled the DBA team to be more productive and focus on more strategic initiatives that service customers.

- Eliminated the manual review of SQL job logs on individual servers, which was both time consuming and error prone. The elimination of this task alone saved each DBA two hours each day.
- Job failures and conflicts were clearly displayed on a visual calendar enabling the DBA team to efficiently adjust schedules in order to optimize resources, saving another two hours per DBA each day.
- Configuration of alerts was performed on a global level instead of individually on each SQL Server, considerably reducing the setup time for SQL Servers across the enterprise.
- The SMTP mail client provided a reliable notification system, so the DBA team did not have to worry about not receiving an alert for a key job on a production server.

It was evident to the DBA team that Event Manager presented a comprehensive and reliable notification system, and with Event Manager's outlook-style calendar, the company's complex event schedules could be efficiently managed to create performance gains throughout their enterprise.

SQL Sentry Event Manager

Saves Time and Improves Reliability

"SQL Sentry Event Manager has become our primary tool for managing the overall health of our SQL Server environment. The tool eliminates the need to configure alerting on individual SQL Servers. Event Manager is easy to use and provides a reliable, centralized view of our SQL Server enterprise."
